

systemctl start docker

docker images

docker node ls

docker container run --rm -it --name ucp -v /var/run/docker.sock:/var/run/docker.sock
docker/ucp:2.2.4 install --host-address 172.31.24.145 --interactive

the above ip address is through ifconfig 🙌🙌

docker ps

docker service ls

Go to AWS-> ec2 server (MAIN) and pick the public ip

go to browser and give the public ip (with https://<public ip>)

Then start working on the swarm front-end
